

Energy & Specialty Solutions

Lower consumption, better comfort, longer-lasting assets.

Solar generation, architectural window film, and specialised systems that measurably reduce energy load and improve the performance of the spaces you already operate.

Integrated Solutions. Built for Progress.

Capabilities

Solar Set-Up

Site assessment, system sizing, installation, and commissioning for rooftop arrays.

Architectural Window Film

Solar-control, safety, privacy, and decorative films for glazed facades.

Specialty Systems

Purpose-built installations that address specific operational or comfort needs.

What you get

- Load assessment and indicative payback before purchase
- Reduced cooling demand on glazed elevations
- Commissioning records and performance baselines

Frequently asked questions

How do you size a solar system?

We start from your actual consumption profile and roof or ground area, then model generation against load to recommend a system size with an indicative payback range.

Will window film darken our interiors?

Not necessarily. Spectrally selective films reject a large share of solar heat while keeping visible light transmission high; we match the film to the elevation and use.

Can these works be done without shutting down operations?

In most cases yes. Film application and much of the solar installation are scheduled outside peak hours or in zoned phases.

What warranties apply?

Manufacturer warranties on panels, inverters, and films are passed through in full, alongside our workmanship warranty stated in the contract.
