

Technology

Infrastructure, connectivity, and security that stay up.

We design and install the physical and network layer your business runs on — structured cabling, switching and wireless, surveillance, and point-of-sale — tested, labelled, and documented.

Integrated Solutions. Built for Progress.

Capabilities

Structured Cabling

Copper and fibre backbone, horizontal runs, racks, and certified testing.

Network Infrastructure

Switching, routing, wireless coverage, and segmentation built for growth.

CCTV & Security Systems

Camera design, recording, access control, and remote monitoring setup.

POS Systems

Point-of-sale hardware, cabling, and rollout across single or multiple branches.

What you get

- Certified test results for every cable run
- Labelled, documented, and diagrammed installations
- Scalable design that supports future expansion

Frequently asked questions

Do you provide cabling certification reports?

Yes. Every structured cabling deployment includes channel test results per link, plus labelling schedules and rack elevations.

Can you work with our existing IT provider?

We regularly deliver the physical layer while an in-house or third-party IT team owns the applications, and we hand over full documentation.

Do you support multi-branch rollouts?

Yes. We standardise a site template, then sequence branch deployments so each location is delivered to the same specification.

Is post-installation support available?

Support arrangements are scoped per client, from warranty response through scheduled preventive maintenance visits.

Talk to JCCP

Share your scope, site, and target timeline and we will come back with a structured recommendation. Contact details are available on the JCCP website contact page.
